

# Water Conservation Essential Questions

Day 1: How does the amount of available water impact our environments?

Day 2: How do humans conserve or waste water in our daily lives?

Day 3: Now that we know a lot about a plant's leaves, what characteristics would help a plant survive better in an area with less water?

Day 4: What are other ways that plants have adapted to conserve water besides their leaves?

Day 5: What characteristics then, does a plant need to survive in an area of limited water?

Day 6: What are some ways we saw people conserving water? What does that mean for us?

Day 7: How much water am I actually using? How much is wasted and what can I change?

Day 8: What can I learn about how water is distributed in San Diego?

Day 9: What happens to our region when water is not as plentiful as it once was?

Day 10: What can I do to teach others about conserving water?
